

RBSselect

RBSselect: The first choice for a flexible and efficient IT environment

travelbasys

Your Operating System for Success

RBSselect is a solution designed for the travel industry, which can be used to integrate industry-specific reservation, accounting and mid-office systems flexibly into the existing IT environment. Business and integration logics run separately in this solution, reducing the complexity of the entire data exchange. This allows you act independently of the system and react to the constantly changing requirements of the industry more efficiently.

All travel systems integrated on a single layer

Is delivering service and performance your goal, are fast connections your business? If so, then your IT should benefit from this too! RBSselect integrates different travel systems, such as CRS, GDS, mid- and back-office components. The solution makes all relevant data available on one level and forwards data to downstream systems in the right business logic after they are validated and secured. Downstream systems may include ERP systems (Oracle Finance, SAP®, Agresso etc.), mass printing facilities or data warehouses. As a result, you save time and always have an eye on all data and business transactions.

Separate processing logic, greater agility & security

RBSselect keeps business and integration logic constantly apart, reducing the complexity of daily data exchange. The result: You have more control over your data. Your IT department can integrate isolated services, new reservation or booking systems quickly and efficiently into the existing environment. Switching systems is not a problem. You will even be able to adapt quickly to new legal requirements – travelbasys will simply develop suitable standard applications for your solution. Even in the event of disaster recovery or system failure, you can expect absolute reliability: Since all data and processes are stored in a separate location from upstream and downstream systems in RBSselect, your business operations are always safe. And your security specialists and auditors can breath a sigh of relief: If necessary, upstream and downstream system components can be replaced in no time. At the same time, the need for monitoring is reduced because many external interfaces are monitored by RBSselect. A foundation for trouble-free and (cost) efficient business processes.

Your strategic advantage: Autonomy in all IT decisions

Integrating various systems, while gaining greater security through technical separation – that is why RBSselect offers you a decisive strategic advantage: You are flexible to take action, without depending on your IT systems provider. This puts you in a position to consistently steer negotiations to your favour. Make use of this competitive edge! We would be glad to prepare a customised offer for you.

RBSselect: Overview of functionality

- Automatic data transfer from the front-end (booking, payment and customer master data).
- Plausibility tests ensure correct and consistent data.
- Master data administration can be adapted easily:
 - Many reporting options thanks to flexible access to master data (according to company, business division, region, office, customer service representative).
 - Creation of individual master data (e.g. according to provider, product code, payment method) for entry into the relevant financial accounting system.
- Flexible reporting:
 - Customised reports specific to the company, individual offices, providers, product codes.
 - Online bookings are analysed according to hierarchy level, product/provider/product code, job and turnover data, cancellations.
 - All reports can be called up online, downloaded and printed.
- Database query integration into other systems:
 - Web service e.g. for address details, payment status, etc. for all booking data or customer master data; selected bookings can be downloaded.
- User-friendly online search for bookings, functions for manual online agreement – making cooperation with service providers easier.
- Efficient booking control: All status changes to a booking are saved, analysed online.

travelbasys develops sector-specific IT system solutions for the travel and finance industry. For over 40 years, we have been supporting customers from all over Europe with accounting, archiving, CRM and business intelligence solutions based on Software as a Service (SaaS). The core product is the RBS accounting platform for tour operators and travel agencies. More than 1,200 travel providers use our IT-based integration and automation services for their tourism processes and financial transactions. In this context, our audited systems manage a sales volume of over 8 billion Euros, more than 12 million tourism processes, and some 22 million trip profiles a year, making travelbasys' RBS solutions the market-leading back-office and administration systems for travel companies in Germany and Europe.
