

RBS smart hub: Your own business application from the Cloud

We work with you to plan, develop and run your customer-specific business application. In addition to development work and technology selection, travelbasys also takes charge of IT operations, interface integration, data centre security and data processing centre security for you. So you can benefit from our high-performance technologies, our supplier network, and flexible computing centres without the need for own investments.

Special applications made easy

Ever wondered why some of your business processes are still being performed manually? Why isn't there a business application for them? Was development too expensive, the software licence costs too high, or IT operations too complex? Or perhaps you're planning a new IT solution for companies? With RBS smart Hub, there's a simple solution. We work with you to plan your individual business application, develop it according to your specifications and take charge of production operations for you. With this one-stop "Plan-Build-Run" approach, you'll avoid tedious preliminary IT studies and unnecessary up-front costs. Simply outsource your problem, and benefit from our high-performance technologies and expertise.

Skilfully handling the challenge of data integration

Linking and integrating all kinds of data sources and suppliers into your own IT applications is often an immense challenge for businesses. Overcome this easily, and rely on travelbasys. Use our over 40 years' experience in data integration, and particularly our pool of source data and interfaces. Instead of developing, running and servicing a specific interface for every data supplier yourself, the RBS smart hub saves you this step, allowing you to achieve your goal faster.

Business model and data protection under one roof

The issue of privacy and data security is and remains an ongoing challenge for every company and consistently sets new requirements for IT operations. Here, too, travelbasys relieves you of your responsibility by taking charge of running your business application. Our full-service business models not only include continuous maintenance of your application, but also annual auditing based on the highest security standards of the data processing centre used. Scale your data security model according to your needs, from simple daily data back-up to permanent, synchronous data protection at our reserve data processing centre.

RBS smart hub: The modern way to run business applications!

How businesses benefit from travelbasys

- Using travelbasys to plan, develop and run applications avoids unnecessary up-front costs, and allows you to achieve your goal faster.
- Full transparency for your investment and maintenance costs thanks to travelbasys' "Plan-Build-Run" approach.
- Avoid investing in your own software licences and their consequential costs, from licence management to software maintenance fees.
- The high-performance travelbasys technologies give you maximum transaction security, speed and resilience.
- Shift responsibility onto travelbasys when it comes to the ongoing issue of privacy.
- Avoid unnecessary new and duplicate developments by using travelbasys' network of source data and interfaces.
- Individual business and privacy models allow you to flexibly scale your company-specific security requirements.
- Simplify your development cycles through access to travelbasys' expertise and software modules such as authorisation models, master data integration or exchange of accounts.

travelbasys develops sector-specific IT system solutions for the travel and finance industry. For over 40 years, we have been supporting customers from all over Europe with accounting, archiving, CRM and business intelligence solutions based on Software as a Service (SaaS). The core product is the RBS accounting platform for tour operators and travel agencies. More than 1,200 travel providers use our IT-based integration and automation services for their tourism processes and financial transactions. In this context, our audited systems manage a sales volume of over 8 billion Euros, more than 12 million tourism processes, and some 22 million trip profiles a year, making travelbasys' RBS solutions the market-leading back-office and administration systems for travel companies in Germany and Europe.

travelbasys chosen for the research project iTESA from the technology competition Smart Data - innovations from data of the Ministry of economy in Germany (BMWi).
